Metro Ramps Up Conservation and Cost-Saving Initiatives

The first quarter of 2009 was filled with exciting change and product development at Metro! We have significantly increased our “green” conservation initiatives, from expanding our already excellent in-house recycling programs and forming partnerships with “green” vendors to developing innovative technologies and treatment application techniques for our clients that will preserve both our environment and our clients’ financial resources.

If you are a current customer, you’ve likely already seen in action or been briefed on the advantages of, by your Account Manager, the latest chemical combinations available to treat your system. If you haven’t yet taken advantage of these environmentally friendly and cost cutting developments, now is the time to do so!

If you are not already a customer of ours, be sure to get in touch with us to find out how Metro can provide you with a customized “stimulus package,” just for your business! To help facilitate communication, we are happy to announce the creation of a one-stop email shop so that you may be linked with the right people at Metro for your needs. Email address sales@metrogroupinc.com sends messages directly to our Director of Business Development for distribution to the appropriate Account Manager. We even guarantee a response within four hours during our regular business day! We look forward to hearing from you soon.
